

Managing Organizational Change.

In times of mergers, acquisitions, and changes in management, a company's stability can be shaken. Recent studies show that up to half of today's businesses have a lack of leadership and communication, as well as a distrust of upper management. On the positive side, there is a great opportunity for HR professionals to lead positive change and growth during these times.

On August 14, Express Employment Professionals, in partnership with the Bloomington-Normal Human Resource Council, will host a webinar on Managing Organizational Change. Attendees will learn how HR plays a role in the five major change initiatives that companies can face and the nine must-have skills for successfully leading a company through difficult times.
